

Packaging

We take the greatest care when manufacturing our products. A few ground rules should be followed during transport and storage to keep our products in perfect condition.

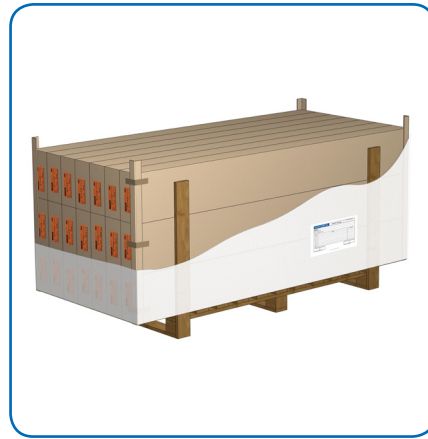

In case of warehouses or worksites, our products should be stored as follows:

- On their edges
- On a flat surface
- In a dry place away from inclement weather and the risk of impacts

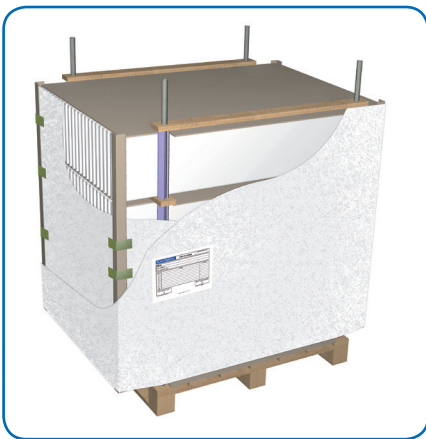

Products are packaged according to the different configurations:

Boxes of metal tiles on pallets

Boxes of panels on pallets

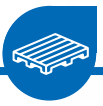

Panels on post pallets

Multi-length panels on post pallets

Panels in open crates

Packaging

Panels are individually protected according to the different configurations:

- Self-adhesive film (prepainted products)
- Kraft paper
- Cardboard spacers
- Foam pads

Pallets are protected according to the different configurations:

- Strapping if necessary (according to the product)
- Cardboard corner strips
- White opaque wrap

Pallets, bundles and crates have the following dimensions and weights:

- Width of 1,200 mm (800 mm available on request and subject to a surcharge)
- Length of 1,200 to 6,000 mm
- Maximum weight of 1,000 kg

Reinforced packaging (subject to a surcharge) is required where the method of transport presents risks:

- Overnight transport
- Express transport
- Exports (depending on the area)

For deliveries straight to the worksite:

- **Standard:** similar products are grouped together and packaged on a pallet.
If necessary, we can specify the products' destination zone at the worksite on the packing list.
- **Optional:** different products intended for the same worksite zone can be grouped together and packaged on a pallet. This service is subject to a quotation.
